

The product improved early germination and growth under greenhouse conditions.

The product when applied in the soil and around the root zone significantly improved growth of both cauliflower and broccoli. The treatment resulted in larger vigorous and uniform looking seedlings.

Effect of the product on cauliflower seedling growth

Effect of the product on broccoli seedling growth

Plan of work for 2017-18

1. Complete analysis of data collected.
2. Study the effect of the product under different stresses in in vitro and pot conditions
3. Complete biochemical analyses
4. Initiate field experiments in Melvin farms.
